We point out an error in Eq. (19) in our original paper [*Chin. Phys. B* **23** 040402 (2014)] and present the correct equation.

Keywords: Thomas precession, precession of planetary orbits, de Sitter precession, Lense–Thirring precession

PACS: 04.80.Cc, 03.50.De, 45.20.D–

DOI: 10.1088/1674-1056/23/9/090401

In a recent paper,[1] we have studied relativistic precessions and have shown that all those precessions could be explained classically. We find an error in Eq. (19). The correct expression should be

$$-\gamma^3 GMm/r^2 = \gamma^3 m\left(\ddot{r} - r\dot{\theta}^2\right).$$

This correction does not influence the results and conclusion of the paper.
